PROFESSIONAL SUMMARY

Engineering Manager with 19+ years across software engineering, cloud platforms, and quality engineering, including startup founding. Led three teams at IONOS, combining reliable delivery with engineer growth. Built an automation framework that cut test development time by 60%; led a 15-member team at Samsung that cut manual validation cycles by 90%.

PROFESSIONAL EXPERIENCE

Data Engineering Team Lead	**Samy Alliance**	Jun 2026 - Present	Berlin, Germany

- Lead a 5-person team spanning Data Engineering and Data Analysis, setting team roadmap, priorities, and delivery standards for a medallion (bronze/silver/gold) data platform built on dbt, Airflow, BigQuery, and Looker, serving analytics, ML, and BI teams for a social media marketing analytics platform
- Drive AI adoption within the team, designing and building agentic AI workflows that consume internal data-pipeline outputs to automate analysis, reporting, and decision support
- Establish internal engineering processes and documentation standards for pipeline development, code review, and data quality, bringing rigor from prior QA leadership into a fast-moving analytics environment
- Own team growth through hiring, onboarding, 1:1s, and performance conversations, coaching engineers and analysts toward greater ownership and technical depth
- Partner with analytics, ML, and BI stakeholders across the company to translate business requirements into a prioritized data platform roadmap
- Partner with the data science team on data engineering and analysis to define, build, and prioritize multiple data products
- Drive data products from concept to launch across engineering, analytics, and data science; main point of contact for stakeholder updates

Senior Engineering Manager	**IONOS SE**	Jun 2022 - Jan 2026	Berlin, Germany

- Led three engineering teams owning internal platforms and services supporting IaaS, PaaS, and DBaaS products, with full responsibility for delivery, runtime stability, and operational readiness
- Designed and implemented QANG internal Python test automation framework adopted by several teams, reducing test development time by 60% and standardizing testing practices company-wide
- Built high-performing engineering team through strategic hiring, onboarding, and mentorship programs
- Conducted structured 1:1s and career development sessions; implemented performance review process with SMART goals to support growth and succession planning.
- Defined quarterly OKRs and individual KPIs for each team; led weekly alignment meetings and quarterly reviews to drive accountability, identify blockers, and promote outcome-oriented execution across teams.
- Integrated Apache Kafka into internal service pipelines to enable event-driven processing, real-time monitoring, and faster incident detection
- Collaborated with product and infrastructure leadership to define quality KPIs such as mean time to detection (MTTD), mean time to resolution (MTTR), and automated test coverage thresholds.
- Established QA metrics dashboard using Grafana and Python scripts, enabling real-time KPI tracking for defect trends, test coverage, and release readiness across multiple teams.
- Implemented a reusable performance testing framework to detect system bottlenecks, measuring key metrics like response time, throughput, and I/O latency to improve overall performance by 10%.
- Collaborated with cybersecurity teams to ensure ISO 27001 compliance for cloud infrastructure testing processes, incorporating security test automation, CVE scanning, and continuous audit support for internal controls.
- Defined roadmap, planning, and priorities for IaaS and PaaS products owned by my teams, incl. snapshot backup, autoscaling, S3, and load balancers
- Worked cross-functionally with product teams on product development, using quality and performance metrics to prioritize improvements; stakeholder point of contact

QA Engineer	**IONOS SE**	Aug 2018 - May 2022	Berlin, Germany

- Led comprehensive testing strategy for cloud infrastructure products including VM, S3, Kubernetes, Load Balancer, and Database services
- Developed modular Python and PyTest test framework increasing test reusability by 70% and reducing CI/CD execution time by 45%
- Managed complex test environments and on-premises hardware provisioning for staging environments supporting 500+ daily test executions
- Designed automated test suites using JMeter, TestCafe, Jenkins, and PostgreSQL achieving 85% test coverage
- Mentored 5+ junior QA engineers through code reviews and best practices training.
- Contributed to defining and monitoring KPIs such as flaky test rate, post-release defect rate, and CI reliability, laying the foundation for later leadership responsibilities.

Customer Quality Engineer	**Intel Corporation**	May 2017 - May 2018	Seoul, South Korea

- Served as primary quality contact for major APAC clients managing quality cases for WLAN and CPU product lines including Sky Lake, Coffee Lake, and Cannon Lake architectures
- Delivered technical support to enterprise customers ensuring 99% issue resolution within SLA timeframes
- Developed diagnostic automation tools using Python, C#, Django, and JavaScript reducing investigation time by 50%
- Managed project budgets up to $50,000 monthly with technical feasibility assessments and ROI recommendations

Senior Software Engineer	**SanDisk Corporation**	Aug 2015 - Sep 2016	Seoul, South Korea

- Led firmware development team for SATA-based SSD Host Layer translating complex OEM requirements into high-performance embedded solutions
- Designed data transmission layer between host and Flash Translation Layer on ThreadX RTOS improving throughput by 10%
- Implemented automated testing strategies using Python and Jenkins ensuring firmware quality and release readiness
- Conducted low-level debugging and I/O performance tuning to identify firmware bottlenecks, delivering measurable improvements in IOPS and throughput.
- Aligned firmware QA goals with corporate milestones and introduced key metrics such as release readiness score and regression failure rate to improve launch predictability.
- Established feedback loops with validation and firmware teams, enabling early bug triage and faster regression closure cycles.

Software Engineer - Team Lead	**Samsung Electronics**	Jan 2010 - Jul 2015	Hwaseong, South Korea

- Led 15-member engineering team developing automation tools for SSD, UFS, and eMMC testing reducing manual validation cycles by 90%
- Architected enterprise-wide test framework supporting OS installation, monitoring, and automated logging for 1500+ test machines
- Designed scenario-based validation tests for 3D NAND flash memory assessing reliability under thermal stress and endurance conditions
- Developed hardware unit test framework using C, FPGA, oscilloscopes, and logic analyzers for early controller validation
- Defined weekly execution KPIs across validation labs, including hardware fault detection rate and automated execution coverage.
- Coordinated cross-site test execution with US and Vietnam teams to maintain milestone alignment.
- Introduced dashboard-based KPI tracking to align international QA efforts, including pass rate trends, hardware fault detection metrics, and execution coverage across geographies.

CORE COMPETENCIES

Category	Technologies & Skills
Leadership & Methodologies	People Leadership, OKR, Delivery Management, Agile, Scrum Master, Cross-functional Collaboration, People Management, KPI/OKR Definition, Performance Reviews, 1:1 Coaching, Organizational Change, Career Growth Strategy
Cloud Platforms & DevOps	AWS, Azure, Kubernetes, Docker, Terraform, Ansible, Jenkins, GitLab CI, GitHub Actions
Programming Languages	Python, Go, Java, Kotlin, C/C++, C#, JavaScript, Shell Scripting, etc
Data Stores & Pipelines	PostgreSQL, MySQL, Redis, MongoDB, DynamoDB, Elasticsearch, Apache Kafka, dbt, Airflow, BigQuery, Looker, Power BI, OpenSearch, Y42, Sanity.io, Medallion Architecture

Category	Technologies & Skills
AI & Automation	Agentic AI Workflow Design, LLM-based Process Automation, Generative AI Applications, Data-Driven Decision Support, Claude, Cursor, Obsidian, Hermes, Hindsight, Langdock, AI harnesses, Skills & Agents, Local LLM Setup
Monitoring & Observability	Prometheus, Grafana, ELK Stack (Elasticsearch), Loki, OpenTelemetry, Flower
Test Automation	PyTest, Selenium, Cypress, TestCafe, JMeter, Cucumber, Playwright, QANG Framework
Compliance & Security	ISO 27001, GDPR, CVE, Security Testing, Risk Assessment, Test Data Governance, Shift-Left Testing

EDUCATION

Degree	Institution	Duration	Location
Bachelor of Engineering in Computer Engineering	Tongmyong University	Mar 2005 - Feb 2010	Busan, South Korea

CERTIFICATIONS

Certification	Issuing Organization	Year
Six Sigma Black Belt	Korea License Approval Development Institute	2024
ISTQB Certified Tester Foundation Level (CTFL) 4.0	ISTQB	2025
AWS Certified Cloud Practitioner	AWS	2025
AWS Generative AI Applications	AWS	2025

Certification	Issuing Organization	Year
AWS Cloud Technology Consultant	AWS	2024
Google Cybersecurity Professional Certificate	Google	2024
IBM AI Product Manager Certificate	IBM	2025
Generative AI for Project Managers	IBM	2025
Generative AI for Program Managers	IBM	2025
DevOps, Cloud, and Agile Foundations Specialization	IBM	2025
Strategic Leadership and Management Specialization Business Analytics Specialization Business Value and Project Management Specialization Global Challenges in Business Specialization	University of Illinois Urbana-Champaign	2025
Coaching Skills for Managers Specialization	University of California, Davis	2025
Engineering Project Management Specialization	Rice University	2025

ADDITIONAL EXPERIENCE

- Startup Co-Founder: Photo editing and management software for photo studios; subscription service for pet-related products.
- Owned product roadmap and engineering KPIs including time-to-market, customer-reported defects, and release stability; implemented early agile rituals and drove execution of MVP within 3-month window.
- Software Engineering Intern: Completed internships in Manila, Philippines developing internal tools and automation projects using ASP.NET
